Adres waar de student zal werken:

Derbystraat 361, 9051 Sint-Denijs Westrem

Korte of lange stage: **4 weken en/of 6 weken (kan beide - keuze student)**

Korte beschrijving van de opdracht:

Creative Therapy empowers therapists to create motivational therapy. We do this by developing exergame solutions. We are a young, enthusiastic team ready to change the world of exergaming and rehabilitation therapy, while doing the things we love!

Creative Therapy is a University Ghent spin-off that develops (and markets) interactive tools for motivation and monitoring during long-term rehabilitation therapy. This aims at increasing the therapy compliance and better feedback for patient and therapist through real time data and analysis displayed on the patient's movements. We focus on the health sector, more specifically on physical rehabilitation. Within this internship you will participate in the Creative Therapy team as a full member and Full Stack Dev for the further development of the web application.

During the internship, the student will help to improve the current cloud based application. Different challenges are presented, ranging from the development of new features to the resolution of bugs and further development of current

features. This can be situated in both the front- and backend, according to the needs of the users.

Technologieën die aan bod zullen komen:

Profile:

- A rockstar coding Ninja
- You are able to work autonomously as part of a start-up company.
- You have an interest in (exer)games and health.
