Mailadres: Anthony.Coppens@Ordina.be
Adres waar de student zal werken: Blarenberglaan 3B, 2800 Mechelen

Korte of lange stage: **6 weken**

Korte beschrijving van de opdracht:

Data Visualization for an International Humanitarian Foundation

Concept

A US-based International Humanitarian Foundation focused on children's health already has public and internal Power BI reports. You'll be working remotely for the client and will be responsible to advise and redesign their current reports. Ordina experts will be available to help you learn and apply the Data Visualization best practices in Power BI. The customer expects you to get the most value possible from their data. As such, you will also be expected to brainstorm new report ideas with them.

You'll learn to work with customers while using agile principles and you'll learn the value of working in a team of experts. In case you finish early, you will get a chance to broaden your skills by working on the 2 other assignments of this customer or you might get a new assignment in this domain from the customer.

By the end of this internship, we expect you to have the knowledge and skills to join any organization in any of these roles: junior Data Visualization Developer, junior Power BI Developer

Goal

Help the customer save more lives by enabling them to get the most value out of their data by (re-)designing Power BI reports.
