Korte of lange stage: **4 – 6 weken**

Korte beschrijving van de opdracht:

- A ChatBot module has been released by a 3rd party and needs to be evaluated for internal/external usage.
Can we integrate this in our software suite? Is it useful for support purposes?
What should we do to integrate this?
See <https://www.progress.com/nativechat>
- Our Laboratory Information System GLIMS comes with an extensive user manual, allowing keyword search, but it still is difficult to find the information you need. The idea is to have a chatbot conducting a conversation with a user who is looking for information.
- You'll need to install, configure and evaluate the tool.
- We will provide the tools and guide you to setup an environment.
- A POC will be needed to investigate the full functionality.
