

Internship - internal quality dashboard

Description

Televic has a lot of data in SQM, DQM. PowerBI can evaluate those one by one. A link between SQM, DQM, TRASCAN, SAP data can give a more statistical view on failures and can help in finding a root cause faster or at all.

This work is to implement basic quality monitoring for delivered products to ease up researching information for statistical analysis.

-> Link serial number information with production and subcomponent order information

-> In this implementation track down improvement possibilities for the data or the process.

About Televic Rail

With over 30 years of experience in designing, manufacturing and maintaining on-board communication and control systems, Televic Rail is a leading, trusted partner for railway operators and train builders worldwide.

Its Passenger Information Systems and Control Systems are high quality, tailor-made solutions that offer the flexibility, user-friendliness and stability that our clients ask for. Our various types of on-board control systems such as our bogie monitoring systems are innovative, yet reliable products designed specifically for the railway business.

Trains and trams all around the world are equipped with Televic Rail solutions, from New Zealand to Canada, from China to the United States, from India to Belgium, England and France.
